

## **Do you think computers are a blessing or a curse?**

**(Introduction)** Almost every home, office or school has a computer of some kind these days. Many people feel that these machines are now an essential part of our lives, but how necessary are they really?

**(Body)** On the one hand, one of the main advantages is the time that can be saved by using a computer. This is especially beneficial in the workplace, where employees can do their work far faster than they could in the past. In addition to this, computers can be educational and fun. From a very young age children can gain basic computer skills through programs that allow them to learn, draw, paint and play. In today's technological world, this knowledge can only help them in the future.

On the other hand, there are various negative aspects to using computers. First, many jobs have been lost due to the fact that computers can do a lot of tasks more efficiently than humans. This has led to high unemployment in many countries. What is more, computers can actually cause health problems. That is to say those endless hours in front of a screen can cause eye strain and headaches, which are serious side-effects.

**(Closing)** To sum up, after examining the aforementioned points, it is clear that the advantages of using computers far outweigh the disadvantages. In other words, the importance of computers in our daily lives can be judged by the number of people using them each single day. Computer is not only used by professionals, but also by the little children and grownups at our homes.
